## Bellows & Boots Specialty Sewn Products

Essential Sealing Products can have your sewn product requirements fabricated with competitive pricing and on-time delivery. With the many different types of fabricating opportunities available to our customers, ESP has become known as the "Complete Sealing Device Supplier" in the Midwest.

### Boots, Bellows & Way Covers

The majority of the sewn products we sell are protective coverings. These include rod protecting boots and bellows which are sewn from many different materials to suit our customers' requirements. Way covers are another type of cover made to protect the extremely sensitive and expensive portion of numerous pieces of equipment.

### Custom Sewn Products

Since we started selling sewn products, we have been known as a supplier that will try the very different and exotic designs that our customers have. With these experiments, we have gained the knowledge and know-how to try almost any request. These have been from simple heat reflective or protective blankets to very large and detailed composite pads. Whatever your requirement is, big or small, call and talk to a customer service representative and they will be glad to discuss the options with you.

### Different Designs and Styles are Available

Whether your need is for a rod protecting bellows or boot or heat reflective shields, one call is all it will take to satisfy your requirement of sewn products. Most have the capabilities to incorporate the following accessories to your fabricated product: zippers, Velcro, grommets, vents, wire mesh, guide rings, etc.
